

GEOVENT

GeoFlexGrip

GeoFlexGrip nozzle for use in connection with extraction from garages or other places where you need to start an engine indoors.

The flexible shape of the rubber nozzle makes it perfect for small and medium sized cars with different sizes of exhaust pipes.

Mounting the nozzle on the exhaust pipe is as easy as squeezing it sideways. This will open the lips of the rubber nozzle and allow for easy mounting.

When the nozzle is not in use, the lips will close and work as a damper.

On the larger model, however, we recommend that a manual damper is used.

The GeoFlexGrip can be mounted on the Geovent festoon-system, duct channel or hose reel.

A built in manual damper is optional.

Available in the following sizes:

Exhaust	Hose diameter
ø75 mm	ø100 mm
ø100 mm	ø100 mm
ø125 mm	ø150 mm
